light scattering by small pdf

Dynamic light scattering (DLS) is a technique in physics that can be used to determine the size distribution profile of small particles in suspension or polymers in solution. In the scope of DLS, temporal fluctuations are usually analyzed by means of the intensity or photon auto-correlation function (also known as photon correlation spectroscopy or quasi-elastic light scattering).

Multiangle light scattering (MALS) describes a technique for measuring the light scattered by a sample into a plurality of angles. It is used for determining both the absolute molar mass and the average size of molecules in solution, by detecting how they scatter light.Collimated light from a laser source is most often used, in which case the technique can be referred to as multiangle laser ...

where n is the refractive index of OLED material and Î¾ is a constant that depends on the dipole alignment and the geometry of the OLED device. For most of the organic materials n is about 1.7 and taking the value of 2 for Î¾, the internal coupling efficiency is only about 20%.According to classical ray optics theory about 80% of generated light is lost in wave-guided modes due to glass ...
